USER FLOW & TECHNOLOGY IMPLEMENTATION EXPLANATION

STEP 1 – ADMIN ADDS PRODUCTS

What User Does

The Admin opens the management side of the application and adds affiliate products.

What Happens

The product information gets stored inside the SharePoint Products list.

Technologies Used

SharePoint

Used as the backend database.

How It Is Used

SharePoint stores:

- Product Name
- Product Price
- Product Category
- Product Image
- Affiliate Link

This becomes the central product database.

STEP 2 – STUDENT OPENS APPLICATION

What User Does

The student opens the Campus Affiliate App.

What Happens

The application loads products from SharePoint and displays them.

Technologies Used

Power Apps

Used as the frontend application.

SharePoint

Used as the backend database.

How It Is Used

Power Apps connects directly to SharePoint using connectors.

The gallery component fetches product data and displays:

- Product image
- Product name
- Product price

STEP 3 – STUDENT BROWSES PRODUCTS

Additional Features

- Wishlist feature
- Product sharing feature

Students can:

- Save products into wishlist
- Share products through applications like WhatsApp, Instagram, Telegram, Gmail, etc.

Technologies Used

Power Apps

Used to implement wishlist storage and sharing functionality.

How It Is Used

- Collections or SharePoint lists can store wishlist products.
- Share() and Launch() functions can be used for product sharing.

Purpose:

- Improve user engagement
- Increase product reach
- Improve affiliate traffic

What User Does

The student scrolls through products, searches products, or filters by category.

What Happens

Power Apps dynamically filters and displays products.

Technologies Used

Power Apps

Used for UI functionality and filtering.

How It Is Used

Functions used:

Filter(Products, StartsWith(ProductName, TextInput1.Text))

Purpose:

- Search products
- Improve user experience

STEP 4 – STUDENT OPENS PRODUCT DETAILS

What User Does

The student clicks on a product.

What Happens

The product details screen opens.

Technologies Used

Power Apps

Used for navigation and screen management.

How It Is Used

Navigation formula:

Navigate(ProductDetailsScreen)

The screen displays:

- Product image
- Product name
- Product price
- Buy button

STEP 5 – STUDENT CLICKS BUY BUTTON

What User Does

The student clicks the Buy button.

What Happens

Power Apps triggers the Power Automate flow.

Technologies Used

Power Apps

Used to send data.

Power Automate

Used to handle automation.

How It Is Used

The Buy button sends:

- ProductID
- ProductName
- UserEmail
- AffiliateLink

into Power Automate.

STEP 6 – POWER AUTOMATE TRACKS USER CLICK

What Happens

Power Automate receives data from Power Apps.

Then:

1. Stores click information
2. Generates timestamp
3. Saves data into SharePoint

Technologies Used

Power Automate

Used for workflow automation.

SharePoint

Used for click tracking storage.

How It Is Used

Action used:

- Create Item

Timestamp generated using:

utcNow()

This creates analytics data.

STEP 7 – USER REDIRECTED TO AFFILIATE PLATFORM

What Happens

After tracking is completed:

1. Power Automate returns affiliate link.
2. Power Apps receives link.
3. User redirected to Flipkart OR Myntra.

Technologies Used

Power Apps

Used for redirection.

Affiliate Platforms

Used for final product purchase.

How It Is Used

Launch() function opens affiliate product page.

STEP 8 – PRODUCT PURCHASE HAPPENS

What User Does

The student purchases the product.

What Happens

The affiliate platform tracks the purchase and generates commission.

Technologies Used

Affiliate Platform

Handles purchase and commission tracking.

How It Is Used

Affiliate links connect purchases to the college affiliate account.

STEP 9 – COLLEGE EARNS COMMISSION

What Happens

The institution receives affiliate commission.

Final Outcome

The college generates passive revenue through student purchases.

STEP 10 – ANALYTICS DASHBOARD GENERATION

What Happens

Power BI reads tracking data from SharePoint.

Analytics dashboards are generated.

Technologies Used

Power BI

Used for data visualization.

SharePoint

Used as analytics data source.

How It Is Used

Dashboards display:

- Most clicked products
- Category analysis
- Daily clicks
- User activity

STEP 11 – AI CHATBOT SUPPORT

What User Does

The student asks questions inside chatbot.

Examples:

- Best laptop?
- Cheap products?
- Help?

What Happens

The chatbot suggests products and guides the user.

Technologies Used

Copilot Studio

Used for AI chatbot development.

Power Apps

Used for chatbot integration.

How It Is Used

The chatbot is embedded inside the application.

COMPLETE PROJECT FLOW SUMMARY

Admin Adds Products ↓ SharePoint Stores Data ↓ Student Opens Power Apps ↓ Student Browses Products ↓ Student Clicks Buy ↓ Power Automate Runs ↓ SharePoint Stores Click Data ↓ User Redirected to Affiliate Platform ↓ Product Purchased ↓ College Earns Commission ↓ Power BI Shows Analytics ↓ Copilot Studio Assists Users
