Description

Campus Affiliate Market Place is a centralized affiliate marketing platform developed for educational institutions. The system allows colleges to manage affiliate products and enables students to browse, search, and purchase products through a campus application.

When students click affiliate products and purchase items through platforms like Flipkart or Myntra, the institution earns commission through the affiliate account. The system integrates automation, analytics, and AI chatbot assistance using Microsoft Power Platform technologies.

Problem Statement

Currently, students purchase products individually from e-commerce platforms without any centralized institutional system.

Colleges are unable to utilize affiliate marketing opportunities for revenue generation, click tracking, analytics, and product management.

There is a need for a smart centralized platform that combines product management, automation, analytics, and AI support.

Proposed Solution

The proposed solution is a Campus Affiliate Market Place developed using Power Apps, SharePoint, Power Automate, Power BI, and Copilot Studio.

The application allows:

- Admins to manage affiliate products
- Students to browse and search products

- Automation of click tracking
- Storage of user activity data
- Analytics dashboard generation
- AI chatbot support for product suggestions

The system redirects users through affiliate links and enables institutions to earn commission from purchases.

Technologies Used

- Microsoft Power Apps
 - Microsoft SharePoint
 - Microsoft Power Automate
 - Microsoft Power BI
 - Microsoft Copilot Studio
 - E-Commerce Affiliate Links
-

Functional Requirements

User Management

- Student access to the application
- Admin product management
- User interaction tracking

Product Management

- Add products
- Update products
- Delete products
- Categorize products

Product Browsing

- Search products
- Filter by category

- View product details

Affiliate Integration

- Redirect users using affiliate links
- Track clicks and purchases

Automation

- Track click activities
- Store user activity in SharePoint
- Return affiliate links dynamically

Analytics

- Most clicked products
- Category-wise analysis
- Daily click reports

AI Chatbot

- Product recommendations
- User assistance
- FAQ support

Non-Functional Requirements

- User-friendly interface
- Fast response time
- Secure data handling
- Scalable architecture
- Reliable automation workflow
- Real-time analytics support

System Architecture

The system follows a layered architecture:

1. Frontend Layer

- Power Apps acts as the user interface for students and admins.
 - 2. Database Layer
 - SharePoint stores products, categories, users, and click tracking data.
 - 3. Automation Layer
 - Power Automate handles workflow automation and click tracking.
 - 4. Analytics Layer
 - Power BI generates reports and analytics dashboards.
 - 5. AI Assistance Layer
 - Copilot Studio provides chatbot support.
 - 6. External Platform Layer
 - Amazon and Flipkart handle final purchases through affiliate links.
-

System Workflow

1. Admin adds products into the system.
 2. Student opens the application.
 3. AI Chatbot recommends products based on student queries.
 4. Student browses and searches products.
 5. Student clicks the Buy button.
 6. Power Automate flow runs.
 7. Click information is stored in SharePoint.
 8. User is redirected to the affiliate platform.
 9. User purchases the product.
 10. College earns commission.
-

In Scope

- Affiliate product management
 - Product browsing system
 - Click tracking
 - Automation workflows
 - Analytics dashboards
 - AI chatbot support
 - Revenue generation system
-

Out of Scope

- Payment gateway integration
 - Direct product selling
 - Inventory management
 - Multi-cloud integration
 - Native mobile application
-

Future Enhancements

- Personalized product recommendations
 - Real-time notifications
 - Student reward system
-

Benefits

- Passive income generation for institutions

- Centralized affiliate management
 - Real-time analytics and reporting
 - Improved user experience
 - AI-assisted product guidance
 - Scalable and efficient system
-

Team Contribution

- Frontend Development using Power Apps
 - Backend Management using SharePoint
 - Workflow Automation using Power Automate
 - Analytics using Power BI
 - AI Chatbot Integration using Copilot Studio
-

Conclusion

Campus Affiliate Market Place is a smart institutional affiliate platform that combines automation, analytics, and AI technologies to create a centralized affiliate management solution.

The project demonstrates how Microsoft Power Platform tools can be integrated to solve real-world institutional and business challenges efficiently.

The system improves affiliate tracking, analytics, and institutional revenue generation while providing students with an easy and interactive product browsing experience.
